

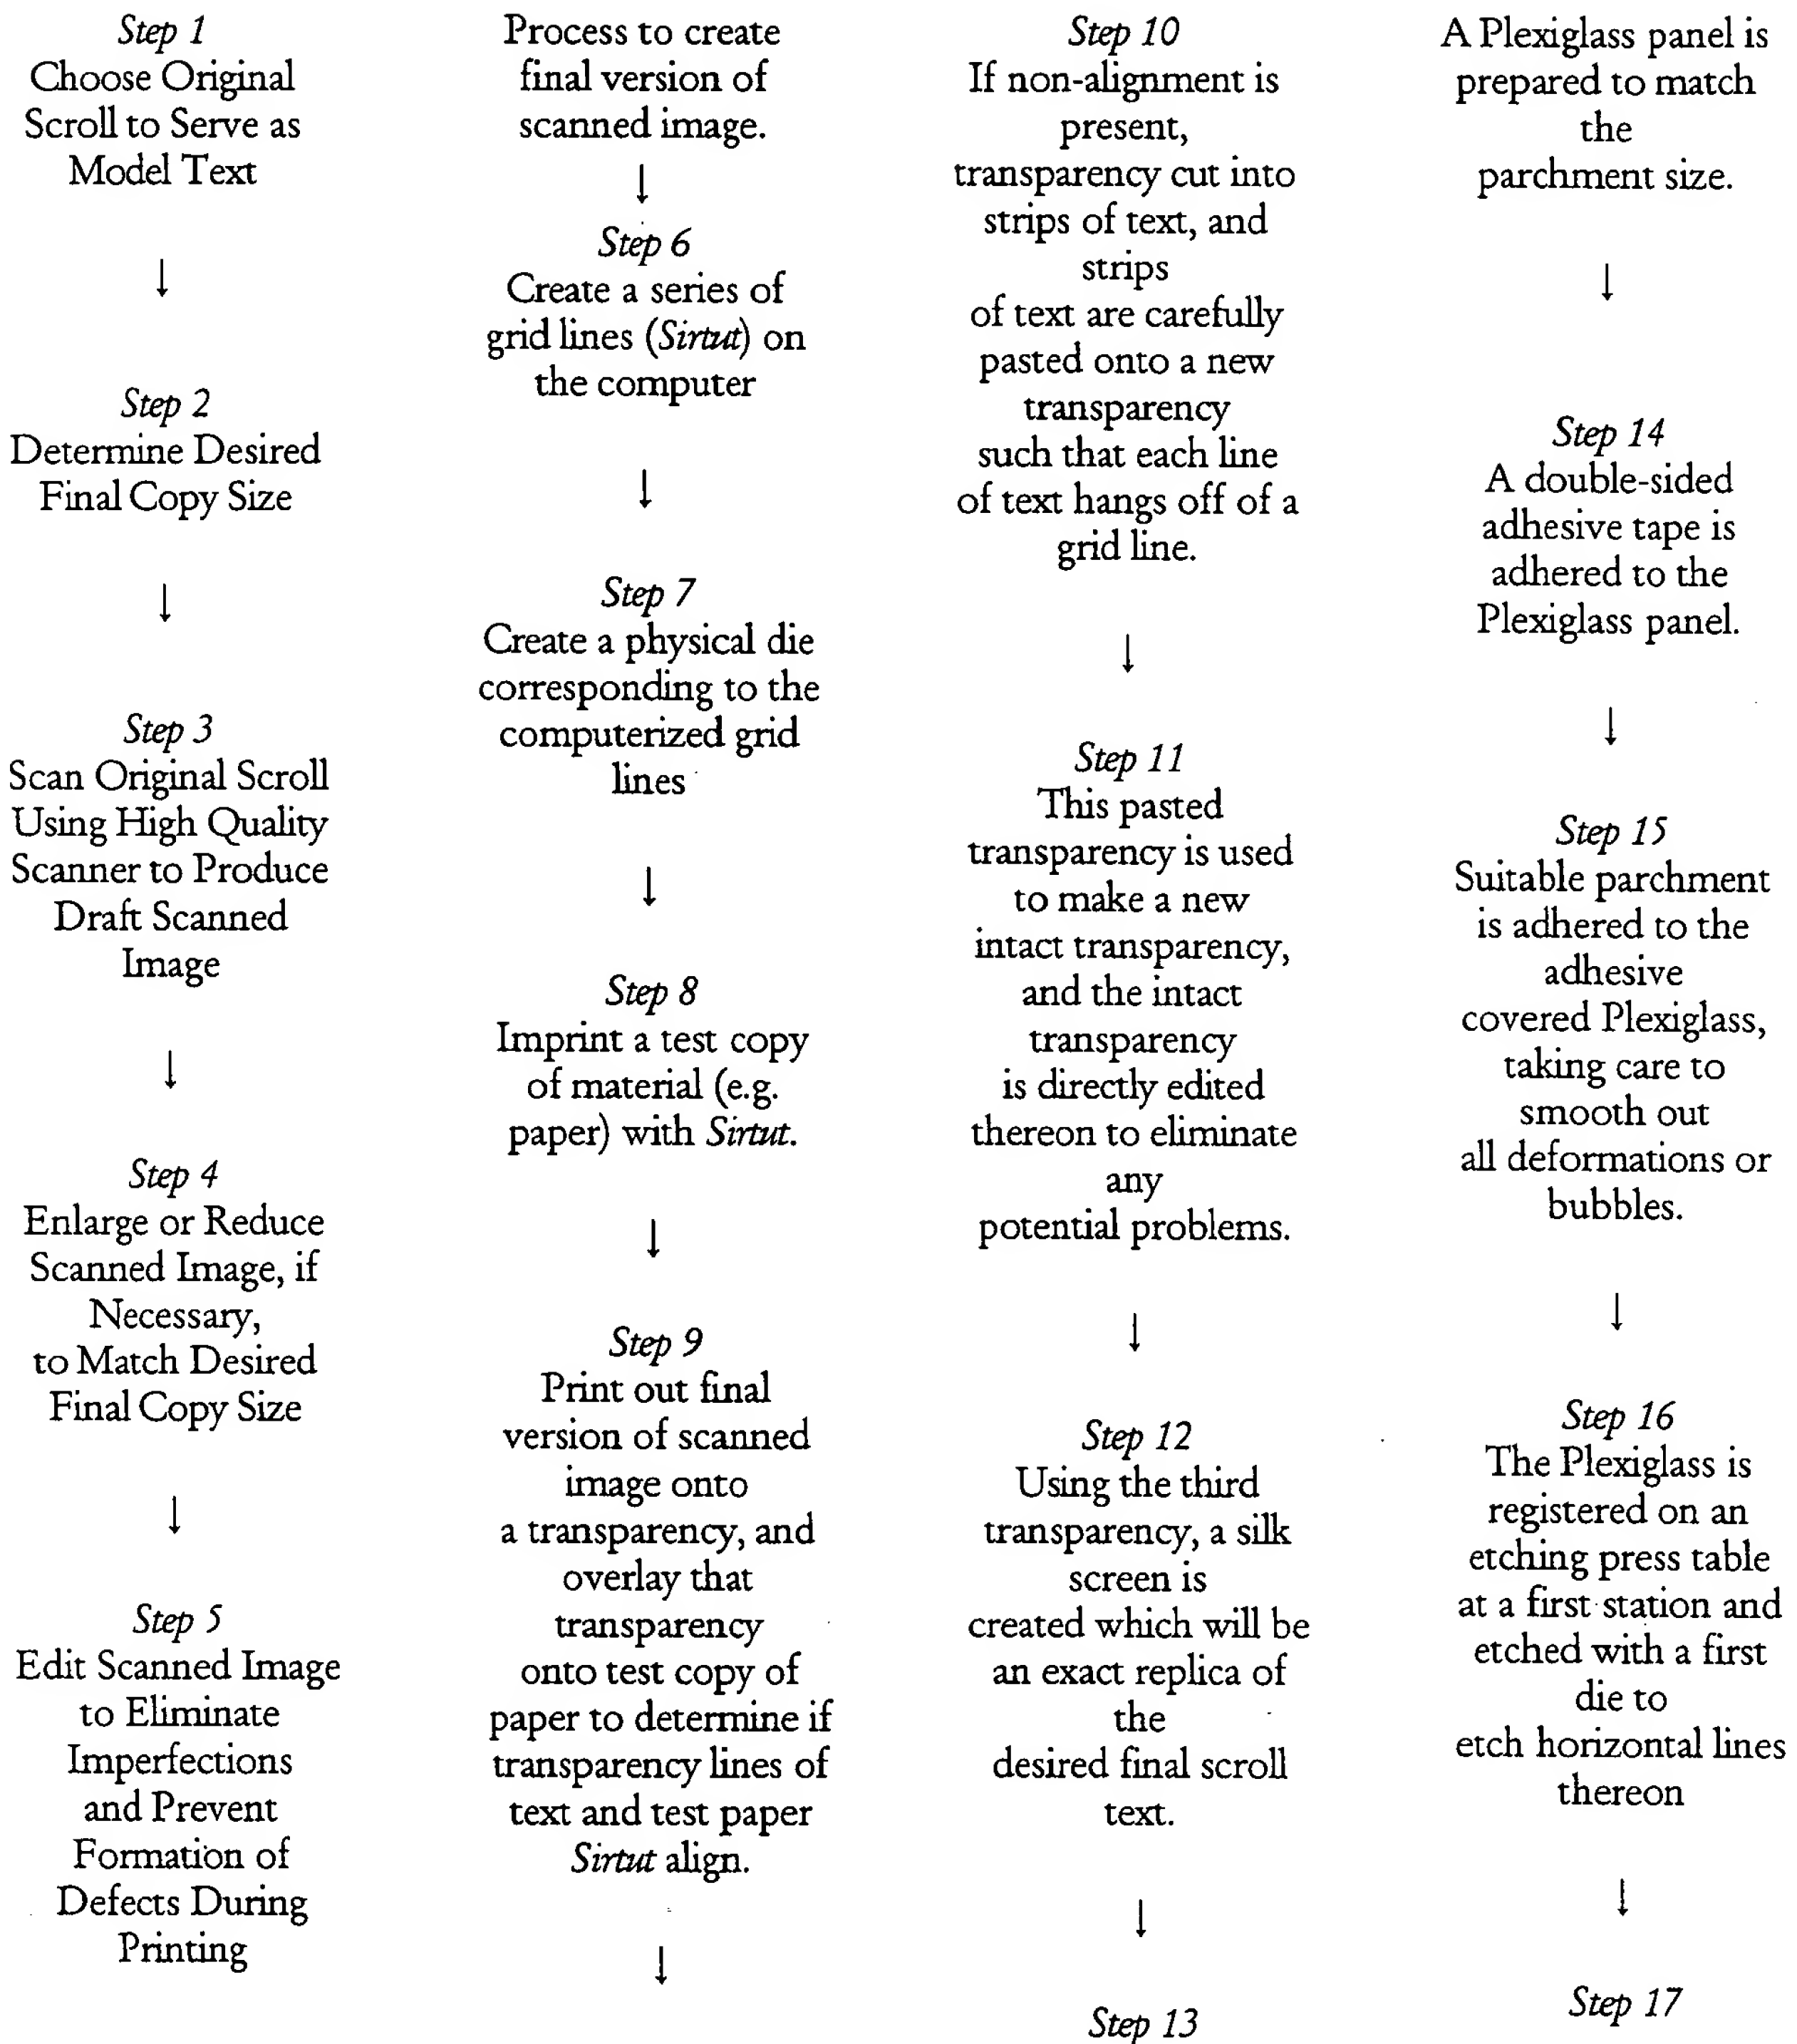

Figure 1

The Plexiglass is registered on an etching press table at a second station and etched with a second die to etch vertical lines thereon

↓

Step 18
The parchment (with all *Sirtut* thereon) is moved to a third station which has a first screen of the text to be printed

↓

Step 19
At that station, the parchment is printed with UV or heat sensitive ink by pressing or forcing ink, by hand, through the pores of the screen.

↓

Step 20
The parchment is illuminated with UV light or heat lamp to cure (i.e. harden) the ink thereon.

(The process of Steps 18-20 are repeated at a second

station having a second screen for printing the names of G-d onto the scroll parchment)

↓

Step 21
The parchment is removed from the adhesive-covered Plexiglass to provide a completed parchment
